A CLAUDE CODE SKILL

cine-director

ONE-LINE BRIEF IN. CINEMATIC PRODUCTION BLUEPRINT OUT.

A director, cinematographer, production designer and screenwriter inside one reusable skill - built to turn a short idea into a locked, model-ready cinematic prompt.

github.com/renatoreissc/cine-director

BEFORE THE FIRST SHOT

Give it the idea. Let it direct the production.

The reference guide is built around a simple principle: reduce open decisions before generation. cine-director applies that same logic to any segment - commercial, editorial, branded content, automotive, fashion, hospitality, wedding, institutional, product or narrative work.

● Your brief, required

Write the central idea in a few lines. The skill expands it into concept, narrative, visual language, shot architecture and execution.

● Reference images, optional

Attach people, products, wardrobe, locations, cars, architecture or visual references. The skill treats them as continuity anchors instead of loose inspiration.

● Target AI, required

Tell cine-director where the prompt will be used. It adapts syntax, density, duration logic and constraints to the selected image or video model.

● Format + duration

Define 9:16, 16:9, 1:1 or another ratio, plus approximate duration. If missing, the skill asks only what materially changes the production.

FROM BRIEF TO DIRECTOR'S BLUEPRINT

One idea. A complete cinematic system.

cine-director is not a generic prompt expander. It resolves the creative and technical decisions that normally sit across direction, cinematography, production design and screenplay before handing the generation model a shot-ready instruction set.

01**READ THE BRIEF**

Identifies segment, objective, audience, subject, emotion, format and production constraints.

02**LOCK THE VISUAL DNA**

Defines references, art direction, palette, texture, lighting philosophy and the visual rules that must remain consistent.

03**DIRECT THE CAMERA**

Chooses shot sizes, lenses, camera bodies, movement, support, drone language, frame rate and depth-of-field behavior appropriate to the segment.

04**BUILD THE STORY**

Creates the beat structure, shot order, action, transitions, cuts, rhythm, sound cues and closing image.

05**ADAPT TO THE MODEL**

Translates the production blueprint into the syntax and limitations of the chosen AI, removing ambiguity and contradictory instructions.

THE FOUR DEPARTMENTS

Not a prompt writer. A virtual film department.

DIRECTOR

Concept, intention, performance, blocking, narrative beats, pacing, emotional progression and final payoff.

CINEMATOGRAPHER

Camera/lens pairing, shot size, focal length, camera height, movement, stabilization, exposure intent, lighting and atmosphere.

PRODUCTION DESIGNER

Location, set dressing, materials, wardrobe, props, palette, practicals, weather, time of day and spatial continuity.

SCREENWRITER

Beginning-middle-end logic, micro-actions, reveals, transitions, edit rhythm, VO/dialogue when needed and end-card logic.

THE OUTPUT

Every shot knows why it exists.

Each generated shot is described as part of one continuous film language. The goal is not more adjectives; it is fewer unresolved variables.

SHOT	01 / 02 / 03...
FRAMING	ECU · CU · MCU · MS · WS · aerial
OPTICS	lens, aperture feel, distortion and compression
CAMERA	dolly, handheld, gimbal, crane, drone, locked-off
LIGHT	key direction, softness, contrast, practicals, atmosphere
ACTION	subject movement + environmental movement
TRANSITION	match cut, motivated cut, whip, occlusion, hard cut
CONTINUITY	identity, wardrobe, product geometry, set, light, direction

ZERO-DRIFT PHILOSOPHY

Consistency is designed before generation.

The reference PDF emphasizes that a film stays coherent when decisions are made before the video model sees the prompt. cine-director extends that principle into a continuity bible for the entire production.

IDENTITY LOCK

LOCKED

Face, age range, hair, body, defining features and performance behavior remain stable.

PRODUCT LOCK

LOCKED

Shape, material, proportions, logos, hardware, color and hero details cannot mutate between shots.

WORLD LOCK

LOCKED

Architecture, geography, weather, time-of-day progression and set dressing follow one spatial logic.

CAMERA LOCK

LOCKED

Lens family, sensor feel, motion language, shutter character, grain and contrast belong to the same film.

DIRECTION LOCK

LOCKED

Screen direction, eyelines, entrances/exits and action continuity are explicitly preserved.

ANY SEGMENT

Same engine. Different film language.

AUTOMOTIVE

rolling rigs, low hero angles, telephoto compression, pursuit drone, reflections and controlled specular light

FASHION / EDITORIAL

model blocking, fabric behavior, attitude, lens proximity, negative space and editorial rhythm

LUXURY PRODUCT

macro detail, material tactility, controlled highlights, precise geometry and premium pacing

HOSPITALITY / ARCHITECTURE

spatial reveal, sunrise/sunset logic, drone establishing, human scale and atmosphere

WEDDING / EVENTS

emotional coverage, anticipation, reaction, environmental grandeur, temporal continuity and musical edit

BRANDED / INSTITUTIONAL

message hierarchy, human credibility, process coverage, visual proof and brand-safe closure

THAT'S THE METHOD

One brief in. A film system out.

Describe the idea. Add references when you have them. Choose the AI. cine-director turns those inputs into a production-ready cinematic blueprint designed to preserve intent, continuity and visual quality from the first frame to the last.

INSTALL / REPOSITORY

github.com/renatoreissc/cine-director

Built for Claude Code. Designed for any AI image or video model.

DIRECT. LOCK. GENERATE.
